

Weekly Emergency Eyewash Check Year: _____

Directions:

- 1) Verify eyewash is functional.
- 2) Flush system.
- 3) Record date and technologist initials in the appropriate box.

Emergency procedure:

During emergency immediately flush eyes with plenty of water for at least 15 minutes, lifting lower and upper eyelids occasionally. Decontamination of the eyes should be undertaken immediately by irrigation with a copious amount of water. After this initial treatment, medical personnel in OMS should continue further treatment. Get medical attention immediately.
