

**SURVEILLANCE OF INVASIVE FUNGAL INFECTIONS IN BONE MARROW/STEM
CELL AND SOLID ORGAN TRANSPLANTATION RECIPIENTS:
A PROSPECTIVE, MULTICENTER STUDY**

Dr. Thomas Walsh
NCI/POB

PRECIS

The objective of this study is to conduct national surveillance for invasive fungal infections in recipients of bone marrow, stem cell transplantation, or solid organ transplantations. This study will be conducted over a three-year period at approximately 20 collaborating transplant centers. The study will commence January 1, 2001, through December 31, 2003. Through the annual accrual of over 9,000 patients, it is estimated that at least 5-8% of these patients (~650) will be accrued annually with documented or suspected invasive fungal infections. This will provide the necessary epidemiologic information to develop strategies for prevention and early intervention for invasive fungal infections in this population.
